The report requires updating with new data and is sent in 48 hours after order is placed.

High chrome mill internals (HCMI)s such as grinding media, heat resistance castings, diaphragm, etc. They are critical components for grinding operations used extensively in cement and thermal power plants. With significant cost savings achieved (~30-40%) through lower wear rate, increased productivity and lower power consumption, HCMI)s are increasingly making inroads into the mining sector.

The industry is a mature one, which has entered the post-competition phase into a brand-creating era, whereby competition will turn from pure price competition to multi-faceted brand competition consisting of service, management and shopping environment.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive. The study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

Over the next five years, LPI(LP Information) projects that High Chrome Mill Internals (HCMI)s will register a 10.6% CAGR in terms of revenue, reach US\$ 1890 million by 2023, from US\$ 1030 million in 2017.
