IC packaging (a.k.a. IC assembly) is one of the essential processes and technologies in IC manufacture, connecting the bare die to the PCB. In electronics manufacturing, integrated circuit packaging is the final stage of semiconductor device fabrication, in which the tiny block of semiconducting material is encased in a supporting case that prevents physical damage and corrosion.

This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, more and more people pay attention to rising environment standards, especially in underdevelopment regions that have a large population and fast economic growth, the need will increase.

The industry is a high-technology and high-profit industry, the research team maintain a very optimistic attitude. It is suggested that the new enterprises to enter the field.
