Induction Cooktop is a kind cooking equipment using electromagnetism to turn cooking pans into cookers (creating heat energy inside the pan itself, instead of firing it in from outside). Induction cooktop cooks food more quickly and safely with less energy, compared with the traditional gas stove.

Simply, an induction cooktop is an electromagnet. Inside the glass cooktop, there's an electronically controlled coil of metal. When turn on the power, there will be an alternating current flow through the coil and it produces a fluctuating magnetic field all around it and directly above it, this will produce heat indirectly.
