Isobutylene (or 2-methylpropene) is a hydrocarbon of industrial significance. It is a four-carbon branched alkene (olefin), one of the four isomers of butylene. At standard temperature and pressure it is a colorless flammable gas.

The classification of Isobutene includes MTBE Cracking, Tert-butanol (TBA), and the proportion of MTBE Cracking in 2017 is about 73.9%. However, growing concerns regarding groundwater contamination caused due to leakage of MTBE coupled with increasing popularity of ethanol as a gasoline blending agent is expected to segment impact growth negatively.

Isobutene is widely used in Butyl Rubber, MMA, PIB and other. The most proportion of Isobutene is used in Butyl Rubber, and the consumption proportion is about 54.2% in 2017.

North America is the largest supplier of Isobutene, with a production market share 42%. The second place is Europe, following North America with the production market share of 31%.

Over the next five years, LPI(LP Information) projects that Isobutene will register a 5.5% CAGR in terms of revenue, reach US\$ 6260 million by 2023, from US\$ 4540 million in 2017.
