A liquid lens uses one or more fluids to create an infinitely-variable lens without any moving parts by controlling the meniscus (the surface of the liquid.) There are two primary types, Electrowetting-Based Liquid Lense and Liquid Crystal Lense. These are not to be confused with liquid-formed lenses that are created by placing a drop of plastic or epoxy on a surface, which is then allowed to harden into a lens shape.

Varioptic accounted for 48.38% of the global Liquid Lenses production volume market share in 2016. Other players accounted for 18.99%, 12.00% individually, such as Edmund Optics and Optilux.

Global giant manufactures mainly distributed in Europe. They have unshakable status in this field. The key product markets locate at USA and Europe. USA takes the sales market share of 57.36% in 2016, Europe followed by with 39.54% in 2016.
