Manual motor starters are electro-mechanical protection devices for the main circuit. They are used mainly to switch motors manually ON/OFF and protect them fuse less against short-circuit, overload and phase failures. Fuse less protection with a manual motor starter saves costs, space and ensures a quick reaction under short-circuit condition, by switching off the motor within milliseconds. Fuse less start combinations are setup together with contactors.

About the price, the High-end products is expensive than the most commonly used products; the price of product from different manufacturers is very different, Europe and US's product is expensive than Japan and China. Usually, EU and US's product price is several times than domestic product.
