The report requires updating with new data and is sent in 48 hours after order is placed.

Membrane filters or "membranes" are polymer films with specific pore ratings. Membranes retain particles and microorganisms that exceed their pore ratings by acting as a physical barrier and capturing such particles on the surface of the membrane.
The Membrane Filter industry concentration is not high; there are many manufacturers in the world, and high-end products mainly from U.S. and Western European.
The key consumption markets locate at developed countries. Europe takes the market share of 23%, and United States is with 20%. China’s consumption market has a quicker growing speed of CAGR 4.1%.
Companies in developing countries such as China, in contrast, put more effort on direct selling business. They can act as exports at the same time, and it is a common phenomenon in this industry. As they do not have that much international brand influence, their product quality is not good enough when comparing with leading companies, however, they have price advantage. They like to expand their market share in developing countries and low-end international market.
Over the next five years, LPI(LP Information) projects that Membrane Filter will register a 6.0% CAGR in terms of revenue, reach US$ 5420 million by 2023, from US$ 3830 million in 2017.

This report studies the global market, especially in North America, Europe, Asia-Pacific, South America, Middle East and Africa, focuses on the top 5 players in each region, with sales, price, revenue and market share from 2013 to 2018, the top players:
