Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Mini C-arms are specifically designed for extremity imaging with a smaller footprint and more mobility than their counterparts in the full-size category. They are used by orthopedic and other extremity surgeons for imaging the hands, feet, ankles, wrists, knees, and elbows and can be found in the hospital surgery or imaging departments, emergency departments (EDs), surgery centers, or physicians' offices.

For industry structure analysis, the Mini C-arm Industry is concentrate. OrthoScan and Hologic account for about 81.94% of the revenue market. Regionally, USA is the biggest sales area of Mini C-arm, also the leader in the whole Mini C-arm.

USA occupied 73.67% of the sales volume market in 2015. It is followed by EU and Asia-Pacific, which respectively have around 10.89% and 15.44% of the global total industry. Other countries have a small amount of sales volume.

For price trend analysis, a key variable in the performance of Mini C-arm producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

For forecast, the global Mini C-arm revenue would keep increasing with annual growth rate with 5~10%. We tend to believe that this industry still has a bright future, considering the current demand of Mini C-arm. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

Over the next five years, LPI(LP Information) projects that Mini C-arm will register a 4.0% CAGR in terms of revenue, reach US\$ 79 million by 2023, from US\$ 62 million in 2017.
