Multi-Crystalline Ingot Furnace is designed for special equipment for the solar industry, so that the necessary equipment, polycrystalline silicon ingots. This type of device can be automatically or manually ingot process, energy efficient, the use of advanced computer control technology, steady directional solidification, the production of polysilicon ingots of high quality, large size. The advantages of this type of equipment: high efficiency, high product quality; heating speed, high efficiency; safe, reliable, multi-device protection, the protection of personal safety; all Chinese operation, full automatic alarm, saving time and effort.

Multi-Crystalline Ingot Furnace is mainly used for solar grade silicon ingots of large-scale production, with its advanced directional solidification of polycrystalline silicon technology, silicon materials after high-temperature melting crystalline condensation through a special process orientation to achieve the quality of polycrystalline silicon solar cell production demands, One for long hours, high accuracy, high reliability, high degree of automation, intelligent large-scale production equipment.

The photovoltaics industry is going through some major changes. A still deteriorating global economic situation, government belt-tightening and a number of corporate incidents have left the industry in an unfamiliar, unhealthy state at the end of 2011. With the end of the year fast approaching, it is time for a change. Most manufacturers produce more machines in 2011, leading to sales storage and almost all of the photovoltaic companies are losing money in 2012 and 2013.

From the view of application market, 65.70% is the most active and potential field because of the widely use of solar cell manufacturers in 2015. Although there is big difference between big companies such as GT Advanced Technologies with new

companies, especially in the price of products, customers still willing to pay more money to achieve products or service with higher quality. Therefore, it will become harder and harder for a new company which doesn't have its own core technology and R&D team to survive in this technology-intensive battle.

As a novel kind of multi-crystalline ingot furnace e, the Consumption process will become mature gradually with more and more companies enter this field. As three key load capacity, lifting height and lifting height production of weight, utilization and product cycle time role in the quality system of multi-crystalline ingot furnace.

For price trend analysis, the storage of multi-crystalline ingot furnace is too much, specifically the speed at which any decline can be passed through to customers.

Over the next five years, LPI(LP Information) projects that Multi-crystalline Ingot Furnace will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
