Anti-block masterbatch is made by several kinds of high effect special additives to mix together and through specific technical process. This kind of masterbatch can enhance the products anti-block property, and lubricant property.

When Anti-block masterbatch is used, one layer of lubricant film will occur and cover the plastic products surface. Meanwhile one microcosmic concavo-convex frame will be formed on the plastic product surface. By this way, it is distinctly to reduce the adhesion effect of plastic products.

PET Type antiblock masterbatch means the carrier is mainly PET resin and it is primarily used in the PET film and sheet industry.

PET type antiblock masterbatch, belonging to the family of functional masterbatch, is mainly made of carrier resin, slipping agent and anti-block agent, as well as other additives. Antiblock Masterbatch is a combination of special additives for efficient anti block and the special processing aid technology. Add this product to the plastic, on one hand can be formed on the surface layer of plastic is extremely thin film lubrication with maintaining smoothness and other hand can bump formed on the surface of a micro-shaped structure, which is very effective in reducing adhesion of plastic products without effect on the transparency of plastics products. Its role is mainly used in films and cap opening to maintain good performance.

As for the application, PET type antiblock masterbatch are used during the production of film and sheet. There is no doubt that PET film owns the largest application share, which was 63.77% in 2016, followed by PET sheet with 28.93% market share.

Compared with other masterbatches, the whole PET type antiblock masterbatch market size is relatively small for the time being.

As is known, PET type antiblock masterbatch is mainly used in the PET industry. Actually, when looking up the whole masterbatch industry, demand from the PP and PE is the largest. Masterbatch consumed in the PET industry is relatively small. Thus, the PET type antiblock masterbatch is a market with about 54.96 million USD presently and is estimated to grow gradually in the coming years, which will reach to 82.50 million USD in 2022.

Over the next five years, LPI(LP Information) projects that PET Type Antiblock Masterbatch will register a 7.3% CAGR in terms of revenue, reach US\$ 89 million by 2023, from US\$ 58 million in 2017.
