This report studies the Piezoelectric Materials market, piezoelectric materials are materials that produce an electric current when they are placed under mechanical stress. The piezoelectric process is also reversible, so if you apply an electric current to these materials, they will actually change shape slightly (a maximum of 4%).

The global market of Piezoelectric Materials Industry is really scattered due to the wide application and consumption scale.

The price of Piezoelectric Materials is slightly decreased in nearly five years. For being accorded with the corresponding application area, the product price has a large differences.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this areas, the future will still have more new investment enter the field.

Over the next five years, LPI(LP Information) projects that Piezoelectric Materials will register a 7.0% CAGR in terms of revenue, reach US\$ 1380 million by 2023, from US\$ 920 million in 2017.
