The report requires updating with new data and is sent in 48 hours after order is placed.

Plasminogen, the proenzyme of the fibrinolytically active enzyme plasmin, is a single chain glycoprotein with a molecular weight of about 90,000-94,000 Da (2). Various isoelectric forms exist and can be separated by means of isoelectric focusing (IEF).

The complete amino acid sequence contains 790 amino acids. Native plasminogen (glu-plasminogen) has a N-terminal glutamic acid group. Partial plasma proteolysis gives rise to a molecule with N-terminal lysine (lysplasminogen).

Currently, the product has obtained the designation of orphan drug by the US Food and Drug Administration (FDA) and by the European Medicines Agency (EMA). Clinical trials are still underway to obtain Marketing Authorization in the United States and in Europe (EU). The report mainly targeting the research status, predicted competitive landscape, market potential and future trends of plasminogen market.

Plasminogen was originally used as an orphan drug for the treatment of congenital plasminogen deficiency, but the researchers found that he had positive effects on wound care and Diabetic Foot Ulcer treatment. And there is hope that the amputation costs and pain of such patients will be greatly reduced. Once FDA certification is available in the Diabetic Foot Ulcer area, it will benefit significantly from the 10 billion USD amputation market.

China's demand is the biggest and the most direct in the entire potential market. The main reason is that China's gradual growth in per capita consumption and has a relatively good medical system. In addition, China has the largest number of people with diabetes in the world. The market demand is obvious.

If it only acts as an orphan drug, it had almost no development prospects and market, with Congenital Plasminogen Deficiency as an example, the global prevalence around 10 thousand people, we expect 2000-3000 of these people may use the drugs, but the income is far less than the R & D expenditure. But the research team is optimistic about its potential use, especially in wound care and Diabetic Foot Ulcer treatment.

Over the next five years, LPI(LP Information) projects that Plasminogen will register a 6.1% CAGR in terms of revenue, reach US\$ 16200 million by 2023, from US\$ 11400 million in 2017.
