Plastics additives are all chemicals which are used to polymerize, process or to modify end use properties of plastics.

Rapidly increasing usage of plastics in industrial manufacturing, construction, automotive and mechanical engineering coupled with increasing cost of natural metal are the major factors driving the growth of plastic additives market. Increasing costs of natural metals has increased preferences for plastic additives. Moreover, augmented household applications and lower cost of plastic products are likely to boost the growth of this market over the forecast period. On the other hand, the global plastic additives market is restrained by stringent government regulation on limited usage of plastic and environmental policies.

Over the next five years, LPI(LP Information) projects that Plastic Additive will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
