The report requires updating with new data and is sent in 48 hours after order is placed.

PLC (Planar Lightwave Circuit) Splitter is integrated waveguide optical power budget device based on quartz substrate, featuring small size, wide operating wavelength range, high reliability, and good light splitting uniformity, which is especially suitable for split circuit connecting head and terminal equipment and realizing photosignal transmission in passive optical network (EPON?BPON?GPON and so on).

The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, the slow downward price trend in recent years will maintain. As competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.

The industry is expected to remain innovation-led, with frequent acquisitions and strategic alliances adopted as the key strategies by the players to increase their industry presence. Meanwhile, optimize product mix and further develop value-added capabilities to maximize margins. Manufacturers can take advantage of this situation by reinforcing their production units and supply-chains to avoid any delay in production turn-around-times (TAT) and supply-lead-times.

Significant and lasting barriers make entry into this market difficult. These barriers include, but are not limited to: (i) product development costs; (ii) capital requirements; (iii) intellectual property rights; (iv) regulatory requirement; and (v) Transitions' unfair methods of competition.

Over the next five years, LPI(LP Information) projects that PLC Splitter will register a 5.7% CAGR in terms of revenue, reach US\$ 1400 million by 2023, from US\$ 1000

million in 2017.
