Power Factor is a measure of how effectively the site uses its electricity supply. Power factor is the ratio of real power (kW) which is actually consumed by the equipment, to apparent power (kVA) which is what must be supplied by the network.

Raw Materials are important component, occupying for the most proportion of cost. It's important and necessary to attach importance to raw materials sourcing.

In general, the raw materials need to outsourcing, and the price, on-time rate and quality are very key indicators, to keep competitive market position, to maximize the profit.

Actually, the price, on-time rate or quality, is just one of key factors to influence on the supply capacity and competitiveness. The lowest total production cost is the total index to maximize the profit.

To a producer, can control the total production cost through worldwide procurement, localization procurement and concentrative purchase, more purchasing focuses on fewer suppliers to large-scale purchase, to large-scale and high efficiency. Now the logistics and information is well-developed, beneficial to worldwide procurement, localization procurement and concentrative purchase. In future, more manufacturers will attach importance to the raw materials purchasing, with strategic sourcing.
