This report studies the Prostaglandin market. Prostaglandins are autocank derived from arachidonic acid. They both sustain homeostatic functions and mediate pathogenic mechanisms, including the inflammatory response.

Prostaglandins control several processes in the body, especially as it relates to the healing process. When tissue is damaged or infected, this group of hormones will create the reactions that cause pain, fever and inflammation, which sparks the healing process. Prostaglandins also stimulate the formation of a blood clot and the contraction of the blood vessel wall when body is bleeding. Once blood clots are no longer needed and the injury begins to heal, another prostaglandin will stimulate the changes that allow the clots to dissipate and the blood vessel wall to relax.

The global average price of Prostaglandin is in the decreasing trend, from 361.6 USD/Kg in 2012 to 331.1 USD/L in 2016. With the situation of global economy, prices will be in decreasing trend in the following five years.

The classification of Prostaglandin includes Human Prostaglandin and Veterinary Prostaglandin. The proportion of Human Prostaglandin in 2016 is about 82%, and the proportion is in decreasing trend from 2012 to 2016.

Prostaglandin is widely used in Cardiovascular, Digestive, Gynecological and Obstetrical, Ophthalmologic, etc. The most proportion of Prostaglandin is Cardiovascular, and the sales in 2016 is about 410 Kg.

Over the next five years, LPI(LP Information) projects that Prostaglandin will register a 6.1% CAGR in terms of revenue, reach US\$ 660 million by 2023, from US\$ 460 million in 2017.
