Relay Tester, also called relay protective tester, is a type of secondary test equipment in power system, and usually be used in electrical utilities, large industries and railway networks.

There are many relay tester producers, but this industry concentration is still high due to the majority of production are dominated by several big players. High-end products are mainly from U.S. and Western European.

In this market, there still has a distinct feature, that is, global giant manufacturers have very little market share in China market. That's because China government encourages native brands, especially in the national power grid, which purchase relay testers by the way of bidding.

In the international market, the marketing channels characteristic differ from company to company.

The international leading companies prefer taking own sales department to expand market. The giant companies are more likely to set their own big agents in some major countries and regions taking charge of regional business building their international market position.

The market is not only influenced by the price, but also influenced by the product performance. Although China domestic companies have price advantage, their quality cannot match the giant brand ones on the performance of reliability and stability. This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, the need of Relay Tester will increase.

Over the next five years, LPI(LP Information) projects that Relay Tester will register a 4.4% CAGR in terms of revenue, reach US\$ 120 million by 2023, from US\$ 100 million in 2017.
