ReS₂ (Rhenium Disulfide) is a transition metal dichalcogenide with a silvery black appearance. Electronically it is a semiconductor with an indirect band gap. Crystals appear flower-like, individual leaves are easy to cleave due to their layered crystal structure, held together by van der Waals force. Rhenium Disulfide is a new 2-Dimensional material and used as a semiconductor. The CAS number is 12038-63-0. The molecular weight is 250.33 and the density is 7.506.

Rhenium disulfide production has high technology barrier and is concentrated relatively. Currently, there are just several producing companies in the world rhenium disulfide industry. The main market players are HQ Graphene, 2D Semiconductors, 6Carbon Technology and Muke Nano. HQ Graphene is the leader in the global market and the production reached 106 Units in 2016.

In consumption market, the global sales value decreased with the 20.22% average increasing rate. Europe is the mainly consumption region due to the bigger demand of downstream applications. This region occupied 44.59% of the global consumption of rhenium disulfide in 2016.

Rhenium disulfide is just in research stage. Semiconductor research and optoelectronics research are the main application direction. With the development of economy, the downstream application industries will need more rhenium disulfide. So, rhenium disulfide has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high quality rhenium disulfide through improving manufacturing process.

Over the next five years, LPI(LP Information) projects that Rhenium Disulfide will

register a 17.5% CAGR in terms of revenue, reach US\$ 610 million by 2023, from US\$ 230 million in 2017.
