Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Rubber sheets are rubber molded into flat sheets with an even thickness and are often sold on a roll of a specific length for easy handling. Common thicknesses of rubber sheets vary from super-thin films to 1/4-inch (6.53 mm) thick, and the thickness of the sheet combined with the type of rubber used in the sheet determine its use. Once the material type is known, tools designed to cut through the rubber are used to cut different shapes from the sheet to form gaskets. The gaskets cut from rubber sheeting keep fluids and gases from penetrating products or keep them contained within vessels or low-temperature mechanical systems.

International economic situation is complicated, in the next few years there will be many uncertainties, and coupled with Rubber Sheet industry in short supply on the market in the past few years, more and more companies enter into Rubber Sheet industry, and the current demand for Rubber Sheet product is relatively low. Ordinary Rubber Sheet products on the market do not sell well; The signal of market price change indicates the trend in the Rubber Sheet industry, low-end product has excess capacity, and high-end product is in short supply.

Each of the Rubber Sheet manufacturers has its own mature sales networks. Through retail stores, their authorized distributors or their partners, those Rubber Sheet manufacturers keep keen on expanding their Rubber Sheet sales. To achieve better sales businesses, Rubber Sheet manufacturers usually invest on their marketing channel infrastructure every year.

Over the next five years, LPI(LP Information) projects that Rubber Sheet will register a 3.0% CAGR in terms of revenue, reach US\$ 4990 million by 2023, from US\$ 4180 million in 2017.
