Shoe polish is a material used for polishing, shining, softening and waterproofing the shoes, so that shoes lasts longer and appears better. Shoe polish is available in paste, cream and liquid form. They are made from wax, mineral oils, collagen, and some other chemicals. Bull shine, high gloss shine and spit shine are popular shoe shine modes. Shoe polish contains certain oils which keep the leather fiber flexible and slows down the oxidation process of leather. Tallow, lanolin, mink oil and neats foot oil among others are major oils in shoe polish. Wax type of shoe polish is made from paraffin, plant based wax or bees wax. Naphtha, turpentine and mineral spirits are the major solvents used in shoe polish for softening the wax for easier application. Gum Arabic is a viscosity stabilizer utilized for coloring purpose. Shoe creams have higher oil content and lesser oil content. It is good for the conditioning of the shoe leather. Shoe paste is a wax based polish that has more wax content and lesser oil content. Liquid shoe polish is more suitable for shoes made from synthetic leather.
