Steering Columns System is a device intended primarily for connecting the steering wheel to the steering mechanism or transferring the driver's input torque from the steering wheel. The steering column consists of a collapsible housing containing a collapsible rotating shaft. The steering column is connected to the input shaft of the steering gear by a flexible joint. This allows the alignment, and reduces the transmission of road shocks back to the driver. Some of the steering columns have an intermediate shaft, which runs at about an oblique angle, from the column to the steering gear. Some manufacturers fit sensors and control units to the steering column, that provide information to steering control modules as part of an electric assisted or 4-wheel steering system.

In the last several years, Global market of Steering Columns System developed smoothly, with an average growth rate of 3%. In 2015, Global revenue of Steering Columns System is nearly 13.5 billion USD; the actual production is about 96000 K units.

The global average price of Steering Columns System is in the decreasing trend, from 147.8 USD/Unit in 2011 to 141.0 USD/Unit in 2015. With the situation of global economy, prices will be in decreasing trend in the following five years.

The classification of Steering Columns System includes Manually Adjustable, Non-adjustable and Electrically Adjustable. The production proportion of Manually Adjustable Steering Columns System in 2015 is about 66%.
