This report studies the Terpenes market, Terpenes are a large and diverse class of organic compounds, produced by a variety of plants, particularly conifers, and by some insects such as termites or swallowtail butterflies, which emit terpenes from their osmeteria. They often have a strong odor and may protect the plants that produce them by deterring herbivores and by attracting predators and parasites of herbivores. The difference between terpenes and terpenoids is that terpenes are hydrocarbons, whereas terpenoids contain additional functional groups.

In recent years, with the increasing demand, the consumption of Terpenes increased at a stable speed. During 2012~2016, the global sales growth rate is larger than 5% every year.

Now, investors are still optimistic about the Terpenes industry. In the next few years, more and more enterprises will enter this industry and the sales growth rate is forecasted to be about 5.63%.

Despite the decreasing gross margin of integrated development model, more and more enterprises will attempt to front-end and back-end integration.

Over the next five years, LPI(LP Information) projects that Terpenes will register a 6.3% CAGR in terms of revenue, reach US\$ 730 million by 2023, from US\$ 510 million in 2017.
