The report requires updating with new data and is sent in 48 hours after order is placed.

This report studies the Tongue Depressors market. A tongue depressor is a tool used in medical practice to depress the tongue to allow for examination of the mouth and throat. The most common modern tongue depressors are flat, thin, wooden blades, smoothed and rounded at both ends, but, historically, tongue depressors have been made of a variety of materials. Since they are inexpensive and difficult to clean, wooden tongue depressors are labeled for disposal after a single use.

China has the largest global export quantity and manufacturers in tongue depressors market, while the USA is the second sales volume market for tongue depressors in 2016.

Tongue depressors technology is very mature now, and new enterprises can not surpass existing famous brands on reputation or design in the short term. So, the study group recommends the new entrants need to be considered carefully before enter into this field.

Over the next five years, LPI(LP Information) projects that Tongue Depressors will register a 2.5% CAGR in terms of revenue, reach US\$ 330 million by 2023, from US\$ 280 million in 2017.

This report studies the global market, especially in North America, Europe, Asia-Pacific, South America, Middle East and Africa, focuses on the top 5 players in each region, with sales, price, revenue and market share from 2013 to 2018, the top players:
