Tyre Curing Press, (Tire Curing Press in America), is a kind of machine which is used in the vulcanization process of tyre production.

There are two generic curing press types, mechanical and hydraulic. Mechanical presses hold the mold closed via toggle linkages, while hydraulic presses use hydraulic oil as the prime mover for machine motion, and lock the mold with a breech-lock mechanism. Hydraulic presses have emerged as the most cost-effective because the press structure does not have to withstand the mold-opening pressure and can therefore be relatively lightweight. There are two generic mold types, two-piece molds and segmental molds.

HF TireTech Group, Kobe Steel and MHIMT captured the top three global revenue share spots in the tyre curing press market in 2016. HF TireTech Group dominated with 8.47 percent revenue share, followed by Kobe Steel with 7.13 percent revenue share and MHIMT with 6.50 percent revenue share.

The production of Tyre Curing Press was largest in China in 2016, which accounts for 41.87% of the market. Europe is the second large production area with 19.79% in 2016 while India is the third largest with 12.16% in 2016. In terms of consumption, China is the largest market because of the fast development of automobile industry.

Although the market competition of Tyre Curing Press is fierce globally, there are many enterprises can obtain considerable profit form the manufacturing and marketing of Tyre Curing Press and that is the reason that we believe there will also be enterprises enter this market. But it is suggested that enterprises those have plans to enter this industry have careful analysis of this market and the advantages or disadvantages of themselves.

Over the next five years, LPI(LP Information) projects that Tyre Curing Press will register a 0.4% CAGR in terms of revenue, reach US\$ 1040 million by 2023, from US\$ 1010 million in 2017.
