An uninterruptible power system, also uninterruptible power source, UPS or battery/flywheel backup is an electrical apparatus that provides emergency power to a load when the input power source, typically mains power, fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment.

An Uninterruptible Power System (UPS) is an electrical appliance used to provide power backup to a load during a power breakdown. These Uninterruptible Power System (UPS) provide instantaneous power backup by ensuring continuous power supply from energy stored in batteries. Uninterruptible Power System (UPS) are widely deployed for continuous power supply in various industries such as the data center, medical, industry, retail, etc.

The raw materials of Uninterruptible Power System (UPS) are very common. The prices of these raw materials is stable Due to the high added value of smart grid sensors, raw-material prices had little effect on prices.

From the production side, Major manufacturers are concentrated in the manufacturing industry developed areas. In the United States, there are a small number of plants in all major manufacturers to meet the United States pasts of demand. However, device manufacturers are moving their factories to cheaper areas.

Over the next five years, LPI(LP Information) projects that Uninterruptible Power

System (UPS) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
