Vehicle retarder is a device usually used on heavy vehicles to augment or replace some of the functions of primary friction-based braking systems. For the working principal, the vehicle retarder is composed of stator part producing magnetic field and rotor part producing resistance torque through cutting the magnetic lines by rotating of the rotor, so the vehicle retarder can make vehicle decelerating through this torque.

Briefly speaking, in the next few years, vehicle retarder industry will still be a highly energetic industry. Although sales of vehicle retarder brought a lot of opportunities, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the vehicle retarder field hastily.

Over the next five years, LPI(LP Information) projects that Vehicle Retarder will register a 8.0% CAGR in terms of revenue, reach US\$ 2290 million by 2023, from US\$ 1450 million in 2017.
