VHF air-ground communications station is one of the key devices in VHF air-ground communication system for civil aviation air traffic management. It is used for the approach tower, the remote control station of air control center, and the air way station to realize air guide communication of air traffic management.

VHF Air-ground Communications Stations product demand is in a certain space, and the main consumer countries are moderately developed countries and developed countries

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field.

In the last few years, the total number of new type of VHF Air-ground Communications Stations developed by domestic manufacturers is limited. This shows that the efforts to develop new product in China is not enough, but also shows that the allocation space of domestic VHF Air-ground Communications Stations still need to expand. There is still a big gap compared with the imported VHF Air-ground Communications Stations.

As large demand of high-end products at home and abroad, many companies began to enter the field of high-end. Currently, the Chinese VHF Air-ground Communications Stations industry needs to transit to high-end products, this industry still has considerable development prospects in China.

Over the next five years, LPI(LP Information) projects that VHF Air-ground Communications Stations will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
