Wafer Grinder is used to process silicon and compound semiconductor wafers to ultra-thin levels and polishing machines to remove the grinding damage layer from the wafer back-side and to increase chip strength.The main application of wafer Edge Grinder and Wafer Surface Grinder are Semiconductor and Photovoltaic field.

One of the major challenges faced by the global semiconductor wafer grinding equipment market is the high development costs associated with the manufacturing of semiconductor equipment. Semiconductor wafer polishing and grinding equipment requires polishers, grinders, and rotating platens, which are expensive to procure. Also, since there are only a few suppliers of those components, vendors need to invest heavily in acquiring these products. The increasing costs of polishing and grinding consumables, such as slurries and pads, add to the overall cost. Each equipment costs around a million dollars, making the initial investment for various foundries considerably high. Such equipment will also have a high repair and maintenance cost, which further adds to the overall cost.

Over the next five years, LPI(LP Information) projects that Wafer Grinder will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in 2017.

This report studies the global market, especially in North America, Europe, Asia-Pacific, South America, Middle East and Africa, focuses on the top 5 players in each region, with sales, price, revenue and market share from 2013 to 2018, the top players:
