Wheel Speed Sensor is a type of tachometer. It is a sender device used for reading the speed of a vehicle's wheel rotation.

Currently, the wheel speed sensors are different which installed in the same vehicle. For some vehicles, the front left wheel and the front right wheel are also different.

Wheel speed sensor is a sender device used for reading the speed of a vehicle's wheel rotation. The types of wheel speed sensor mainly include hall type and magnetic electric type.

The wheel speed sensor is relatively concentrated, the production of top ten manufacturers account about 87% of global production. The high-end products mainly come from Europe and China.

In the world wide, the plants of major manufactures mainly distribute in Europe and China. The transnational companies, like Bosch and Continental, are the leading manufactures in the World.

The import and export business of this industry is not very frequent. The main reason lies in that the wheel speed sensor manufactures build factories in the main consumption countries.

This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, more and more countries focus on car industry especially in underdevelopment regions that have fast economic growth and potentially car consumption, the need of wheel speed sensor will increase.

Over the next five years, LPI(LP Information) projects that Wheel Speed Sensor will register a 1.4% CAGR in terms of revenue, reach US\$ 7780 million by 2023, from US\$

7160 million in 2017.
