Xylo-oligosaccharides, also named as XOS, is a type of functional polymer sugar composed of 2-7 xylose molecules bonded with ? (1-4) glycosidic bonds. XOS product specifications in the market: including: 95% XOS powder, 70% XOS powder, 35% XOS powder, 20% XOS powder, 70% XOS syrup.

Costs are kept to a minimum and price is set as low as possible because there is no difference in the products in the market.

When a product is introduced to the market a high price is set that limits the volume of sales but still produces a high return. Often used to recover investment costs by targeting 'early adopters' who are less price sensitive. The price is then reduced as competitors enter the market.

A high price is used to encourage the perception of quality. Usually where there is a dominant brand and competitive advantage.

As to the Xylo-oligosaccharide (XOS) market, there are different consumers even though they come from different system. Taking which strategy depending on the company's marketing positioning.

Over the next five years, LPI(LP Information) projects that Xylo-oligosaccharide (XOS) will register a 5.3% CAGR in terms of revenue, reach US\$ 130 million by 2023, from US\$ 93 million in 2017.
