The global 3D Sensing Camera DOE Components market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

DOE Diffractive Optical Elements (DOE Diffractive Optical Elements) is a kind of optical elements that are based on the diffraction principle of light, use computer-aided design, and through the semiconductor chip manufacturing process, etch on the substrate (or the surface of traditional optical devices) to produce a stepped or continuous relief structure (generally grating structure), and form a coaxial reproduction with high diffraction efficiency. Different designs are used to control the divergence angle of the beam and the shape of the light spot to achieve the function of the beam forming a specific pattern.
