Abstracts

The global 4D Imaging Millimeter-wave Radar market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

4D imaging millimeter-wave radar can process height information in addition to the original function. It can detect the four-dimensional data of the objects' orientation, distance, speed, and height. At the same time, 4D imaging millimeter-wave radar has a pixel-level angular resolution, which can resolve the outline of the target object, allowing the radar to achieve an imaging function similar to that of LiDAR.

4D imaging millimeter-wave radar technology has been gaining traction across various industries, driven by the increasing demand for advanced sensing and imaging capabilities in applications such as automotive, surveillance, security, industrial automation, and robotics. The automotive industry has been one of the primary drivers of the market. 4D imaging millimeter-wave radar is a crucial component of advanced driver-assistance systems (ADAS) and autonomous vehicles, contributing to enhanced safety features like collision avoidance and pedestrian detection.
