The global Aluminum Alloy Subframe market size is predicted to grow from US\$ 632 million in 2025 to US\$ 1122 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

In 2024, global Aluminum Alloy Subframe production reached approximately 2.71 million units , with an average global market price of around US\$ 220 per unit.

An aluminum alloy subframe is a modular load-bearing structure positioned between the vehicle body and the suspension, steering and powertrain systems. Manufactured typically via high-pressure die casting, extruded profile welding or cast–forged hybrid processes, it provides a high-stiffness, lightweight frame onto which front/rear suspension control arms, the steering gear and the engine/e-motor and transmission assemblies are mounted, and is then bolted to the body-in-white using bushings and fasteners. Compared with traditional steel subframes, aluminum alloy subframes significantly reduce sprung mass while maintaining strength and fatigue life, thereby contributing to vehicle lightweighting and improved fuel economy or EV range. Through features such as hollow ribs in castings, multi-chamber extruded profiles and localized thickness optimization, more functions can be integrated—such as battery trays, underbody protection and towing points—while also improving NVH and handling. As a result, aluminum alloy subframes are increasingly adopted in mid- to high-end passenger cars, premium brands and new energy vehicle platforms, making them a key component within lightweight chassis systems.

In the value chain, aluminum alloy subframes sit in the midstream between “aluminum alloy materials and casting/extrusion feedstock” and “subframe design and manufacturing ? vehicle assembly and OEMs.” Upstream players supply primary

aluminum ingots, 6xxx/7xxx-series automotive aluminum sheet and extruded bar, casting alloys and melt treatment, welding consumables and associated rubber bushings and fasteners. Representative material and semi-finished suppliers include companies such as Novelis, Hydro, Constellium, Alcoa and Chinalco. In the midstream, specialized chassis-structure Tier 1s and large component groups undertake topology optimization, CAE simulation, tooling and process development for high-pressure die casting, large integrated casting, extruded-profile cutting and welding, or cast-forged hybrid processes, producing aluminum front and rear subframes and EV-specific subframes in volume. Internationally this space includes aluminum-intensive body/chassis suppliers and leading Chinese aluminum chassis-part manufacturers. Downstream customers are passenger-car and light-commercial-vehicle OEMs such as Volkswagen, Mercedes-Benz, BMW, Audi, Toyota, Honda, Tesla, as well as Chinese brands like Geely, BYD, Great Wall, NIO and XPeng, which adopt aluminum subframes on mid- to high-end models, SUVs and new energy platforms to meet combined requirements for lightweighting, handling and emissions. In addition, subframe suppliers also serve the aftermarket with reinforced or performance-oriented aluminum subframes, creating a mix of OEM and aftermarket demand.

The annual production capacity of a single-line Aluminum Alloy Subframe is approximately 8,000 units, with a gross profit margin of approximately 15%-25%.

United States market for Aluminum Alloy Subframe is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
