The global Anterior Cervical Interbody Spacer System market size is predicted to grow from US$ 398 million in 2025 to US$ 534 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

The Anterior Cervical Interbody Spacer System refers to a medical device used in spinal surgery, specifically in the anterior cervical spine. This system is designed to provide stability and support to the cervical spine, particularly in cases where disc degeneration or other spinal conditions necessitate surgical intervention. The device is commonly used in anterior cervical discectomy and fusion (ACDF) procedures.

Ongoing exploration of advanced materials, such as bioresorbable polymers or materials with improved osseointegrative properties, to enhance fusion and reduce the need for long-term hardware.
