The Anterior Lumbar Plate System is a medical device used in spinal surgery to stabilize and support the lumbar spine, particularly in the anterior (front) region. This system typically includes implants and instrumentation designed for anterior lumbar interbody fusion (ALIF) procedures. The goal of an ALIF procedure is to alleviate spinal instability, decompress nerves, and promote fusion between adjacent vertebrae.

Ongoing research and development in the use of advanced materials for plates and screws, including materials that promote better integration with bone, reduce the risk of complications, and enhance biomechanical properties.
