The global Arthroscopic Electrode market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Arthroscopic Electrode is a special surgical instrument used in arthroscopic surgery to perform therapeutic operations such as cutting, removing or cauterizing tissue within a joint. It is inserted into the joint cavity through the arthroscopic surgical hole (or incision), and uses electrical energy for precise tissue repair and treatment.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
