Augmented and virtual reality surgical training is the use of augmented reality (AR) and virtual reality (VR) technologies to provide immersive and interactive surgical simulation training for medical practitioners. Its core lies in simulating real surgical operations through virtual environments or augmented reality scenes, and providing real-time data support during the surgical process, such as anatomical structures, surgical paths, etc., to help doctors improve surgical skills and reduce actual operational risks.

The market size of augmented and virtual reality surgical training has been continuously expanding in recent years, mainly driven by the increasing demand for medical training, policy support, and technological progress. On the one hand, doctors need more efficient and safe training methods, and governments around the world are increasing their support for medical technology innovation, promoting the application of AR/VR technology in the medical field. On the other hand, the maturity of AR/VR technology and the reduction of hardware costs have further driven the growth of market demand. At present, the number of enterprises in the market is gradually increasing, and competition is becoming increasingly fierce. Internationally, well-known companies such as Intuitive Surgical and FundamentalVR have advantages in technology research and development as well as market promotion. There are also some domestic enterprises involved in this field, such as Virtualmed Technology, Invision Digital Technology, etc., which have a certain market share and brand influence in the local market. In order to stand out in the competition, these companies constantly launch differentiated products.
