The global Automated Microbial Molecular Identification System market size is predicted to grow from US$ 1420 million in 2025 to US$ 1920 million in 2031; it is expected to grow at a CAGR of 5.2% from 2025 to 2031.

The automatic microbial molecular identification system is a high-tech tool that uses molecular biology technology, combined with automated instruments and data analysis software, to quickly and accurately identify microbial species. It extracts genetic material such as DNA or RNA from microorganisms, amplifies and analyzes the genetic material using technologies such as polymerase chain reaction (PCR), gene sequencing, and gene chips, and then compares the measured gene sequences with known microbial databases through bioinformatics algorithms, thereby achieving rapid identification of microbial species.

In recent years, the global market size of automated microbial molecular identification systems has continued to grow, driven mainly by medical demand, technological advancements, and policy support. With the aggravation of infectious diseases and drug resistance, medical institutions are increasingly demanding rapid and accurate microbial identification. The progress of high-throughput sequencing technology, artificial intelligence and automation technology has significantly improved the performance and efficiency of automatic microbial molecular identification system. Governments around the world have strengthened their supervision of medical equipment, food safety, and environmental monitoring, and have also promoted the application of automatic microbial molecular identification systems. The main participants in the global market include Beckman Coulter, Thermo Fisher Scientific, BioMerieux, Danaher, and other companies that are utilizing advanced technology and innovative solutions to enhance the quality of their products and services.
