## Abstracts

The global Automotive Human-Machine Interaction Solutions market size is predicted to grow from US\$ 14869 million in 2025 to US\$ 25190 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

Automotive human-machine interface (HMI) solutions refer to the interaction between the driver and vehicle systems through multimodal interfaces (visual, voice, tactile, gesture, etc.). It solves the problems of complexity, driver distraction, and insufficient safety associated with traditional mechanical button interactions, thus improving the driving experience and information visualization.

Upstream, it relies on display panels (resolution, brightness), sensors (recognition rate, latency), and chips (computing power/power consumption); midstream consists of HMI system integrators, with parameters including the number of interaction methods, task success rate, and integration time; downstream applications are concentrated in passenger cars, electric vehicles, and autonomous driving, with requirements focusing on safety, comfort, and information transparency. Future development trends include multimodal fusion (voice + gesture + HUD), AI-driven personalized interaction, vehicle-cloud collaboration, and low-power, high-resolution displays, which will become key competitive advantages in the industry.
