The global Automotive Power Battery Recycling market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Automotive power battery recycling refers to the process of recovering and reusing used or end-of-life batteries from electric vehicles (EVs) and hybrid electric vehicles (HEVs). As the adoption of electric vehicles continues to grow, the recycling of automotive power batteries becomes increasingly important to address environmental concerns, resource conservation, and the efficient use of valuable materials.

The global market for automotive power battery recycling has been witnessing significant growth due to the increasing adoption of electric vehicles (EVs) and hybrid electric vehicles (HEVs). As the electric vehicle market expands, the volume of end-of-life batteries also increases, creating a need for sustainable recycling solutions. The Asia-Pacific region is a significant player in the automotive power battery recycling market. China, in particular, is a major producer and consumer of electric vehicles, driving the demand for battery recycling facilities. Europe is another key market for automotive power battery recycling. The region's strong focus on sustainability, environmental regulations, and support for electric mobility has led to the establishment of advanced recycling facilities. North America is also witnessing substantial growth in the automotive power battery recycling market. The United States and Canada have seen increased investment in recycling infrastructure. The future outlook for the global automotive power battery recycling market is promising. As electric vehicle adoption continues to grow, the need for effective and sustainable recycling solutions will also increase. Innovations in recycling technologies and processes are expected to enhance the efficiency of battery recycling and maximize resource recovery.
