In 2025, the global production of Belamcanda chinensis extract is approximately 280 tons, with an average selling price of about US\$48 per kilogram. The production capacity in 2025 is 780 tons, with an average gross profit margin of approximately 20-30%. Belamcanda chinensis extract refers to the active ingredients extracted from the rhizomes of the Belamcanda chinensis plant. Belamcanda chinensis is a traditional Chinese medicine, and its extract is mainly used to treat sore throats, bronchitis, and other respiratory diseases, and possesses various pharmacological effects, including anti-inflammatory, antibacterial, and antiviral properties.

The upstream core raw material in the Belamcanda chinensis extract industry chain is the dried rhizome of the Belamcanda chinensis plant (a member of the Iridaceae family). Its supply is directly affected by artificial cultivation techniques, harvesting cycles, and the standardization level of cultivation in the producing regions. Downstream application industries are highly concentrated in the pharmaceutical industry (as a key raw material for anti-inflammatory, cough-relieving, and expectorant traditional Chinese medicines and modern preparations), the high-end skincare and oral care industries (utilizing its antibacterial and antioxidant bioactivity), and the research and development and production of some plant-derived agricultural fungicides.
