The global Biodegradable Packaging Papers Barrier Coatings market size is predicted to grow from US$ 2615 million in 2025 to US$ 3648 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

Biodegradable Packaging Papers Barrier Coatings are eco-friendly coatings that can be broken down into harmless substances in the natural environment through microbial action, designed to enhance the barrier properties of packaging paper. These coatings are typically made from natural polymers (such as starch, cellulose, chitosan) or biodegradable synthetic materials (such as polylactic acid PLA, polybutylene adipate PBAT). Their primary function is to block oxygen, water vapor, grease, and other external substances, thereby protecting the packaged contents from contamination and spoilage. Compared to traditional non-biodegradable coatings, biodegradable coatings can naturally decompose after disposal, reducing environmental pollution, and are particularly suitable for single-use packaging and food packaging. With global attention on plastic pollution and the push for environmental regulations, biodegradable packaging paper barrier coatings are becoming an important innovation in the packaging industry.

United States market for Biodegradable Packaging Papers Barrier Coatings is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Biodegradable Packaging Papers Barrier Coatings is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
