The global BMS Chips market size is predicted to grow from US$ 1225 million in 2025 to US$ 4588 million in 2032; it is expected to grow at a CAGR of 21.2% from 2026 to 2032.

BMS chip does not specifically refer to a chip, but a general term for AFE (battery sampling chip), MCU (micro control processing unit), ADC (analog to digital converter), digital isolator and other products. Its significance lies in the voltage and temperature detection of lithium batteries, short circuit/open circuit protection measures, real-time detection of current and so on.

The global market for semiconductor was estimated at US$ 579 billion in the year 2022, is projected to US$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
