The global Breast Cancer MRI Screening System market size is predicted to grow from US$ 1213 million in 2025 to US$ 1937 million in 2031; it is expected to grow at a CAGR of 8.1% from 2025 to 2031.

Breast cancer MRI screening system is a medical device based on magnetic resonance imaging (MRI) technology, which is specially used for early screening and diagnosis of breast cancer. It can clearly display the structure and lesions of breast tissue through high-resolution imaging technology, especially suitable for screening high-risk populations (such as patients with a family genetic history) and dense breast tissue. The main features of MRI screening system are high sensitivity, radiation free, and multi parameter imaging. It can detect small lesions that are difficult to detect by mammography and ultrasound. Compared to X-ray examination, MRI does not use ionizing radiation, has higher safety, and provides more comprehensive diagnostic information through different imaging sequences.

In recent years, the market of breast cancer MRI screening system has maintained a steady growth trend. The increase in incidence rate of breast cancer and public health awareness has promoted the increase in screening needs. The continuous upgrading of MRI technology, such as the application of high field MRI and artificial intelligence assisted diagnosis, has improved the accuracy and efficiency of screening. In addition, governments of various countries have introduced a number of policies to promote early screening for breast cancer. The above factors have all promoted the expansion of the market. The main participants in the global market include international giants such as Canon Medical Systems, Philips, Hologic, etc. They dominate the high-end market with their technological advantages and brand influence. Domestic enterprises such as United Imaging Healthcare and Wando Medical Equipment have gradually expanded

their market share through technological innovation and price advantages, especially in the primary healthcare market where they have performed outstandingly. The main challenge of breast cancer MRI screening system market is that the high equipment cost and complex operation technology may limit its popularity. The future development trend is continuous advancement of technological innovation, continuous improvement of equipment performance, expansion of clinical application scope, optimization of cost-effectiveness, and strengthening of interdisciplinary cooperation.
