Cable distribution cabinet is a junction point where all the cables inserted in the cabinet, and distributed across the system demarcation set point.

Cable distribution cabinets are heat, flame, and temperature resistant. Cable distribution cabinets are used in hazardous environments, where power cables are needed and supplied. Cable distribution cabinets provide the demarcation for various set points to supply the power to various loads, in power failures or short circuits, the system eventually gets affected. Distribution cabinet provides safety and security to the complete system in any abnormal load condition by installing fuses and relays, circuit breakers able to monitor and make required changes as an when and it is very important for the power system. Cabinet distribution cabinets having inbuilt fuses, relays, and switches, any unusual state led to automatic shutdown so the system can be protected. Cable distribution cabinets are Inter-connected to the local grid in order to distribute power supply from single system-various small systems it is highly recommended for safety used in local substations. Various other power distribution cabinets used in electrical distribution cabinets are VCB breakers cabinets, SF6 Breakers cabinets, load control unit cabinets, capacitor bank cabinets etc., and all these systems required a cabinet system in substation.
