The global Calcite Acid Neutralizer market size is predicted to grow from US$ 737 million in 2025 to US$ 1147 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

The easiest method to neutralize acidic water and boost pH is to pass the water through a filter containing calcite, a naturally-occurring mineral rock consisting of approximately 95% calcium carbonate and 3% magnesium carbonate. It is commonly used in residential and commercial water treatment applications to neutralize acidic or low pH water to reduce corrosiveness, to balance pH prior to iron treatment or after reverse osmosis treatment, and to prevent corrosion and the leaching of metals from the plumbing system. Calcite is slow-acting and self-limiting. It is best used in circumstances where the pH level of the water treated is between 6.0 and 6.9. For applications where the pH level is less than 6.0, blending calcite with another media called Corosex will produce better results than calcite alone. Corosex (Magnesium oxide) is faster-acting and capable of larger pH corrections. This is especially true where high flow rates are desired.

Water treatment refers to the whole process of adopting different water treatment processes and chemicals based on the water quality of the water to be treated, so that the water quality meets the requirements of production, life and environment. Water treatment agent is the chemical used for water treatment, also known as water treatment agent, is widely used in chemical, petroleum, light industry, textile, printing and dyeing, construction, metallurgy, machinery, urban and rural environmental protection and other industries, in order to achieve the purpose of water conservation, corrosion and scale inhibition and treatment of wastewater. According to the use of classification, water treatment agents can be divided into flocculants, anti-scaling

agents, corrosion inhibitors and so on. In addition, water treatment agents also include various auxiliary agents, including defoamers, cleaning agents, pre-film agents, chelating agents, decolorizers, activated carbon, disinfectants and so on. With the increasingly serious problem of global water shortage and the gradual increase in people's concern for the environment, the global demand for water treatment chemicals continues to increase. According to the data, the global water treatment chemicals market in 2022 totaled about 40 billion U.S. dollars.
