A Cationic Optical Brightener Agent is a type of fluorescent dye designed to enhance the apparent whiteness or brightness of materials by absorbing ultraviolet (UV) light and re-emitting it as visible blue light. The cationic (positively charged) nature of these agents makes them particularly effective in binding to negatively charged substrates, such as certain textile fibers and paper products. By forming strong electrostatic interactions with these materials, cationic optical brighteners improve the brightness and aesthetic appeal of products without altering their intrinsic properties. This characteristic is especially valuable in industries aiming to achieve high whiteness levels in their products.

United States market for Cationic Optical Brightener Agent is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Cationic Optical Brightener Agent is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
