## Abstracts

The global CeFeB Magnet market size is predicted to grow from US\$ 561 million in 2025 to US\$ 984 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

CeFeB magnet is a rare-earth permanent magnet in which cerium (Ce) partially substitutes neodymium or praseodymium in the NdFeB magnet system. By incorporating abundant and low-cost cerium, CeFeB magnets aim to reduce material costs while maintaining acceptable magnetic performance. They can be manufactured through sintering, bonding, or hot-deformation processes. Although their magnetic properties are generally lower than those of conventional high-end NdFeB magnets, CeFeB magnets offer a favorable balance between cost and performance, making them suitable for motors, household appliances, consumer electronics, and other cost-sensitive industrial applications.

In 2025, global production of CeFeB magnets reached 34,100 tons, with an average selling price of US\$16.8 per kilogram. Typical single-line production capacity is approximately 1,000-5,000 tons, and the industry's gross profit margin is approximately 15%-25%. Cost structure: direct materials account for approximately 78%, manufacturing costs account for approximately 17%, and labor costs account for approximately 5%. Industry chain: upstream consists of rare earth mining and separation, and rare earth alloy and powder suppliers; downstream consists of manufacturers of motors, automobiles, home appliances, consumer electronics, and magnetic components.

United States market for CeFeB Magnet is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for CeFeB Magnet is estimated to increase from US\$ million in 2025 to

US\$ million by 2032, at a CAGR of % from 2026 through 2032.
