A cervical spinal disc prosthesis, also known as a cervical disc replacement or cervical disc arthroplasty, is a medical device used in spine surgery to replace a damaged or degenerated intervertebral disc in the cervical (neck) region of the spine. This procedure is typically performed to alleviate pain and restore mobility in the neck while preserving the natural motion of the spine.

There has been a global increase in the incidence of cervical spine disorders and conditions such as degenerative disc disease, herniated discs, and spinal stenosis. This trend has driven the demand for cervical spinal disc prosthesis as a treatment option.
