## Abstracts

The global Chebulic Myrobalan Extract market size is predicted to grow from US\$ 89.22 million in 2025 to US\$ 138 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2025, the global production of Terminalia chebula extract was approximately 2,850 tons, with an average selling price of about \$32 per kilogram. The production capacity in 2025 was 3,350 tons, with an average gross profit margin of approximately 20-30%. Terminalia chebula extract is a natural ingredient extracted from the fruit of the Terminalia chebula plant, possessing various medicinal and health benefits. Its main active components are tannins and phenolic acids, which have antioxidant, anti-inflammatory, antibacterial, and antitumor effects. In traditional medicine, Terminalia chebula extract is widely used to treat symptoms such as diarrhea, cough, and sore throat.

The upstream core of the Terminalia chebula extract industry chain includes Terminalia chebula fruit as raw material, extraction solvents, and purification and separation materials; downstream applications are extensive, mainly concentrated in the health products, pharmaceutical, cosmetics, and food industries. Due to its antioxidant, anti-inflammatory, and digestive-promoting effects, Terminalia chebula extract is widely used in herbal health products and nutritional supplements. It is also used in the pharmaceutical industry in formulations for treating indigestion and as an antibacterial agent. Furthermore, it is used in cosmetics as a natural ingredient to improve skin health and slow down aging, and in some foods as a natural additive to enhance health benefits.

Terminalia chebula extract, as an important herbal ingredient, is gradually gaining a

significant position in the global herbal health products and natural medicine market. Terminalia chebula has a history of thousands of years of use in traditional Chinese medicine, primarily valued for its various health benefits, including antioxidant, anti-inflammatory, digestive support, and immune-boosting properties. With the increasing global consumer demand for natural, side-effect-free health products, the market demand for Terminalia chebula extract continues to rise. Its applications are becoming increasingly widespread, particularly in traditional Chinese medicine, functional foods, health supplements, and personal care products.

The Asian market, especially China and India, is a major consumer market for Terminalia chebula extract, and its market size is continuously expanding with the popularization of traditional Chinese medicine culture and herbal health products. Meanwhile, the growing interest in herbal and natural ingredients in the European and American markets is also driving the penetration of Terminalia chebula extract into the global market. In addition to the traditional pharmaceutical and health supplement industries, Terminalia chebula extract is also widely used in the cosmetics industry, added to skincare products as an antioxidant and anti-aging ingredient, meeting consumers' demand for natural and environmentally friendly skincare ingredients.

However, despite the promising market prospects, the production of Terminalia chebula extract still faces some challenges, such as climate change, stable supply of raw materials, and further improvements in extraction technology. In the future, with advancements in production technology and increasing market demand for high-quality herbal ingredients, the market for Terminalia chebula extract is expected to continue to grow.
